

WHERE DOES YOUR FOOD COME FROM?

Due October 9, 2018

Using the data you collected during class, you will hand-draw and illustrate a map showing where the various ingredients that make a Hersey's chocolate bar come from, how far they are from Hersey, PA, as well as one interesting fact about the production/growth of that ingredient. Do this as inset captions on your map. As a synthesis question, I want you to tell me how you figure out how much carbon is produced that enters the atmosphere due to the manufacture of a single Hersey's chocolate bar. All units are to be metric. Grammar and presentation always count. Cite your sources. If you don't have sources, I can only assume you made this all up and we know that's not going to end well 😊.
